

LTYE7600 is general purpose data acquisition, conditioning & analysis software.

It supports all compatible instruments and allows users to set up parameters for sampling, conditioning, data format and signal sources

LTYE7600 Conditioners Virtual-Panel

LTYE7600 Test, Analysis & Parameters

Features

- Data acquisition control and real-time analysis for all systems
- Signal conditioner and data acquisition parameter setup
- Selectable acquisition modes: oscilloscope, manual, continuous, triggered, etc
- High efficient data storage and fast data conversion to other formats such as CVS, Matlab, Excel, etc
- 16bit, 32 channel virtual signal generator
- Easy installation and operation

Analysis Capability

- Time Domain Analysis:
- Data capture, data edition, outlier removal, trend removal, smooth, statistical analysis, probability analysis, correlation analysis etc.
- Frequency Domain Analysis
- FFT, PSD, CSD, TFT, coherence, digital filters

LTYE7600 32 CH Virtual Signal
